## Boiler and Equipment Hire

Founded more than 130 years ago and operating in over 100 countries around the world, Cochran are the internationally acknowledged experts in the provision of packaged steam, hot water generation and heat transfer systems utilising shell boiler designs, combustion and ancillary technology constructed to meet the most stringent UK, European and international standards.

Cochran offers the range and flexibility to deliver solutions that match the application; backed-up by a complete package of technical advice and design and manufacture, from the smallest system through to the planning, management and delivery of the largest turnkey projects.

The total Cochran offering extends to include servicing, spares and planned maintenance solutions, combined with in-depth technical support throughout the long operational life of a Cochran boiler and it's ancillary equipment.

### Boiler and Ancillary Equipment Hire

**Flexibility:** Cochran provides a variety of flexible options for temporary heat and energy applications. Typically, hiring a Cochran boiler provides short or medium term heat or steam to supplement peak load requirements, or to provide coverage to support your maintenance, upgrade or repair outages.

Hire is a quick, simple and cost-effective solution that combines a wide range of solutions with flexible terms. A short-term weekly or monthly hire is ideally suited to meet the needs of system downtime resulting from statutory inspections, repairs and upgrade outage. Hiring is also an excellent solution to high load periods, short-term projects requiring additional capacity, or interim boiler cover during the development and installation of new boilers.

**Long-Term Leasing:** Cochran can also provide units on longer lease terms. Ideal for situations where short-term capital expenditure can be an issue, leasing combines Cochran's industry-leading efficiency and reliability with financial simplicity, making it an excellent choice for temporary sites and emergent businesses.

**Quick, simple installation:** Supplied in a quickly installed containerised or trailer-mounted form, or as part of a purpose built temporary boilerhouse for larger units, hired Cochran Boilers include all delivery and installation. Each unit is complete with all the steam hoses, connectors and pipework, blowdown vessels, water treatment, fuel tanks and chimney/flue sections required for operation. Set-up, operation and breakdown cover are optional, but otherwise all you need to supply is water, electricity and fuel!

**Support:** Where required, Cochran can embed operational staff during the hire period, or can provide dedicated training support to ensure the system is operated at optimal efficiency levels. All equipment is backed up by the full Cochran product support, service and breakdown cover package.

# Boiler and Equipment Hire

## Efficient, Flexible Solutions

### Trailer Mounted Boilers:

Transported quickly and efficiently, a mobile trailer-mounted boiler hire unit is simply unhitched and connected for 'instant' energy.

### Containerised Boilers:

For small to medium sized applications, especially for longer-term hire. Equipment is mounted in a fully secure container that provide a rapid 'plug and play' solution.

### Static Boilers:

For large steam applications on long-term hire, Cochran offer a range of static steam boiler hire options. Delivered on low loaders, they are craned into position on-site. Temporary boilerhouses can be constructed to accommodate them where required.

### Ancillary Equipment:

All hoses and ancillary equipment is normally provided as part of the installation. Cochran also offers a full range of other equipment and components which often required for temporary installations.

### Water Treatment:

Cochran's specialist Water Treatment Team advise clients on the best chemical and service regime to deliver safe, reliable and economic operation of the boiler house. The Company can provide and install all the equipment specified.

### Training:

Whilst Cochran installations are complete and ready to run, in many instances customer operators may require training to ensure they achieve maximum cost efficiency and reliability from the equipment. Cochran is a world-respected provider of on-site Heat and Power equipment training.

### Embedded Staff:

In many cases hire reflects increased workloads that may present manpower issues. Cochran can place its own operating teams on-site to deliver the ultimate no-worries energy solution.

## The Complete Package

- Flexible short, temporary or long term hire and lease options to meet tidal requirements and testing, repair and upgrade outages.
- Hiring cuts out the need for large capital equipment expenditure.
- The latest world-renowned Cochran steam boilers in a range of capacities covering a broad spectrum of outputs.
- Rapid commission Trailer-mounted and Containerised solutions and long-term high-volume static options.
- Full site installation and commissioning service included.
- All combustion equipment, hoses and ancillary equipment included within the package.
- Water softening treatment and chemical dosing packages available as both stand-alone rentals or part of a comprehensive heat and power package.
- On-site operator training by Cochran's internationally respected Training Team.
- Compliance with PM5 guidelines for un-manned operation. Remote Cochran monitoring solutions available.
- Temporary boiler houses installed where required for larger capacity applications.
- Provision of pressure reducing sets, additional pipework, blowdown vessels, fuel tanks and chimney and/or flue sections where required.
- Full back-up support from Cochran's national UK service team, including 24/7 rapid repair response and product support.
- International hire and leasing customers benefit from a mirror breakdown and service support provision by Cochran's national agent presence in more than 100 countries worldwide.
- Comprehensive Cochran spares stock held in at a UK network of stores and internationally by agent-operated stores facilities; ensuring any issues are resolved rapidly and effectively.
